Archetype

The Grid

Archetype team - 14/09/2020

The Grid becomes the formal identity of the building and renders it recognizable in its urban environment.

The playful façade offers a variety of choices in creating various qualities of space: closed spaces, balconies, niches. It allows the use of a variety of materials: ceramic tiles, aluminum lattices and glass panes. The flexibility in materials creates diversity and the possibility to adjust to the products that are offered in the market and agree with the budget.
